Q1. Write a query to generate following output.

Employee_id	Full_Name	Email	Salary
100	Steven King	sking@gmail.com	$24,000.00
101	Neena Kochhar	nkochhar@gmail.com	$20,000.00
102	Lex De Haan	ldehaan@gmail.com	$17,000.00
103	Alexander Hunold	ahunold@gmail.com	$9,000.00
104	Bruce Ernst	bernst@gmail.com	$6,000.00
105	David Austin	daustin@gmail.com	$4,800.00
106	Valli Pataballa	vpatabal@gmail.com	$4,800.00

```
SELECT employee_id,first_name||' '||last_name Full_name,email,salary

FROM employees;
```

Q2.Write a query to display job_id and number of manager under particular job. Show only those jobs that have more than one manager.

Example:

Job_ID	Managers
IT_PROG	3
SH_CLERK	5
SA_REP	5
ST_CLERK	5

```
SELECT job_id,count(manager_id)

from employees

where manager_id>1

group by job_id;
```

Q3. Display the country name and number of employees those working in particular city that count of employee is greater than 30.

(Hint: Using Equijoin and Group by)

```
SELECT count(employee_id),c.country_name

FROM employees e,departments d,locations l,countries c

WHERE e.department_id=d.department_id
```

```
AND d.location_id=l.location_id

AND l.country_id=c.country_id

group by c.country_name

HAVING count(employee_id)>30;
```

Q4. Display cities name and number of departments present those cities. And exculde departments there are no any employees.

```
SELECT l.city,count(d.department_id)

from employees e,departments d,locations l

WHERE e.department_id=d.department_id

AND employee_id is not null

group by l.city
```

Q5. Display the salary range and number of employees how are salary in between of range.

(Hint : Job_Grade table , Equijoin , Group by)

Low_Sal	Hig_Sal	Number_Of_Employees
1000	2999	24
3000	4999	25
5000	9999	40
10000	14999	16
15000	19999	1
20000	25000	2

Q6. Display Year list and number of Employees join in particular year.

(Hint: Group by and To_Char Function)

Year	Number_Of_Employees
2001	1
2002	7
2003	6
2004	10

2005	29
2006	24
2007	19
2008	11

```
SELECT to_char(hire_date,'yyyy'),count(employee_id)

FROM employees

group by to_char(hire_date,'yyyy')

order by 1;
```

Q7. Display Manager_id , Manager Full Name and Under number of employees only those managers how have more than 5 employees under working. Result sort by manager_ID

Manager_ID	Full_Name	Number_Of_Employees
100	Steven King	14
120	Matthew Weiss	8
121	Adam Fripp	8
122	Payam Kaufling	8
123	Shanta Vollman	8
